EXPERIMENT 15: ANALYSE VARIOUS TYPES OF SERVERS USING WEBALIZER

AIM

To analyse various types of servers using the Webalizer tool.

REQUIREMENTS

Linux system, Apache HTTP server, Webalizer, and sample server access logs.

THEORY

Webalizer is a web-server log analysis tool that generates usage statistics in HTML format. It analyses access logs and reports visits, pages, hits, bandwidth usage, requested files, active hosts, countries, browsers, operating systems, and referrers.

It can be used to analyse logs from different server types when suitable log files are available:

1. **Web server:** Hosts websites and records HTTP requests (e.g., Apache).
2. **FTP server:** Transfers files and records file access activity.
3. **Mail server:** Handles email delivery and access logs.
4. **DNS server:** Resolves domain names and records query logs.

PROCEDURE

1. Install Apache and Webalizer.

```
sudo apt update
sudo apt install apache2 webalizer
sudo systemctl enable --now apache2
```

2. Generate web-server activity by opening the local Apache page in a browser.

```
http://localhost/
```

3. Generate a Webalizer report from the Apache access log.

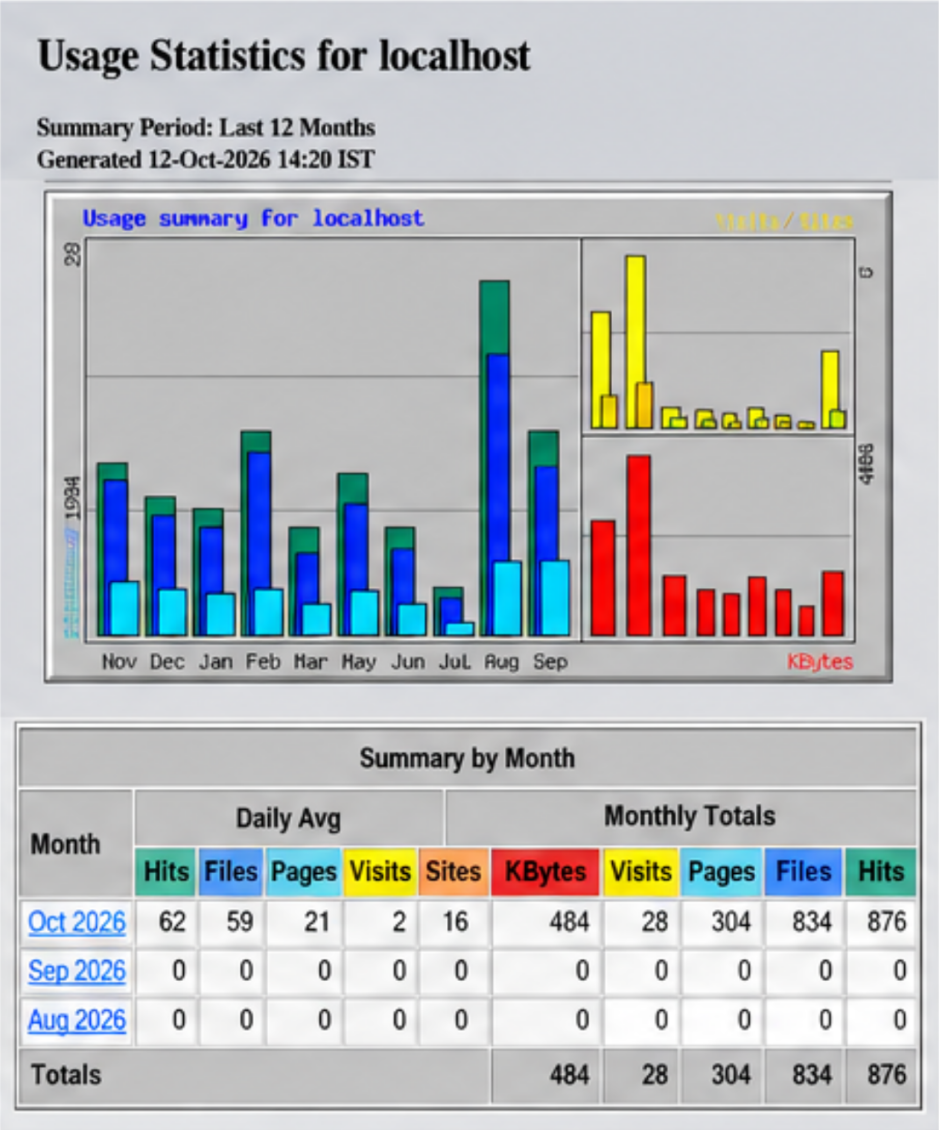

```
sudo webalizer -c /etc/webalizer/webalizer.conf
```

4. Open the generated report in a browser. The default report directory is commonly `/var/www/html/usage/` or the directory configured in Webalizer's configuration file.

```
http://localhost/usage/
```

WEBALIZER REPORT OUTPUT

The report contains usage statistics for localhost. The summary graph compares monthly hits, files, pages, visits, sites, and transferred data. The monthly table records daily averages and monthly totals. In the supplied screenshot, October 2026 shows 876 hits, 834 files, 304 pages, 28 visits, and 484 KB transferred.

Usage Statistics for localhost

Summary Period: Last 12 Months
Generated 12-Oct-2026 14:20 IST

Summary by Month

Month	Daily Avg					Monthly Totals				
	Hits	Files	Pages	Visits	Sites	KBytes	Visits	Pages	Files	Hits
Oct 2026	62	59	21	2	16	484	28	304	834	876
Sep 2026	0	0	0	0	0	0	0	0	0	0
Aug 2026	0	0	0	0	0	0	0	0	0	0
Totals						484	28	304	834	876

Figure 1: Webalizer usage statistics for localhost.

ANALYSIS

The report indicates that the recorded activity occurred mainly in October 2026; September and August show zero activity in the displayed summary. Webalizer can help identify traffic trends, popular resources, and usage levels from server access logs. Analysis of FTP, mail, or DNS servers requires compatible log data or conversion into a supported format.

OBSERVATIONS

The generated report displays monthly usage, daily averages, total hits, files, pages, visits, and transferred data. The recorded totals in the screenshot are 876 hits, 834 files, 304 pages, 28 visits, and 484 KB.

RESULT

Server log usage statistics were generated and analysed using Webalizer, and the report was examined to observe monthly activity and traffic totals.
